Regulation

About Mesura

Mesura SAS was founded in 1949 with headquarters in Forbach in east France. It is the head of a group of companies that design, manufacture and sell components, systems and services for regulating and measuring Natural Gas. Today Mesura SAS has production plants in France, Tunisia, India and Italy. In 2012, Mesura SAS joined the Cavagna Group, one of the top manufacturers of equipment and components for compressed gas control (gases for energy, alternative fuel gases, medical gases, industrial gases, cryogenic gases and special gases).

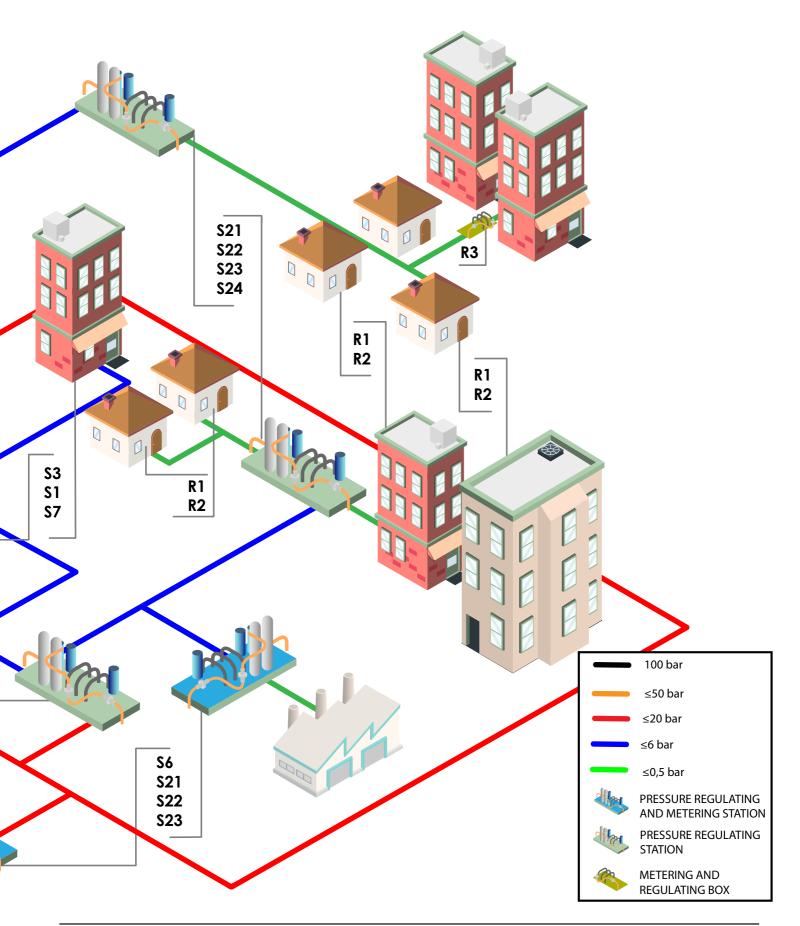

About Cavagna Group

Since 1949, the Cavagna Group has been supplying industries and consumers worldwide, to become today's leading manufacturer of Equipment and fittings for compressed gases, gas storage and Control. With nine vertically integrated production units in Italy, nine others spread on five continents and a distribution network covering over 145 countries throughout the world, Cavagna Group offers only the best, most reliable and dynamic services to the customers.

Natural Gas Applications

Pressure Governors

R1-R2

1 SCOPE

The **R1** and **R2** series regulators are a line of direct action type pressure governors, normally used for domestic applications, generally installed directly to the meter or in installations in gas grids for natural and manufactured gas, lpg, or other non-corrosive preliminarily treated stable gas.

2 FEATURES

- · Body in alluminium die-cast
- · Available as type A (regulator)
- Available as type F (regulator + UPSO)
- · UPSO device with automatic or manual re-arming
- · Fixed setting
- · Sealable
- · Anti-Tampering construction
- · Built-in filter (upon request)
- · Suitable for outdoor installation
- · Painting on request

3 TECHNICAL DATA

	Layout	inlet Pressure	Outlet Pressure	Nominal Capacity (m³/h)	Regulating class (AC)	Closing pressure class (SG)	Working temp. (°C)	Connections

P2	N					20		1"
R2	M H	0,2	12 ÷ 37	6		20		

Available layout:

- · M: Straight connection
- · N: Angle connection
- · H: Angle Horizontal connection

Double Stage Pressure Regulators

S1

1 SCOPE

The **\$1** series regulators are a line of direct action type pressure regulators, double stage, normally used for domestic applications, if directly assembled to the meter or in decompression installations in gas grids and industrial uses for natural and manufactured gas, lpg, or other non-corrosive preliminarily treated stable gas.

2 FEATURES

- · Body in zamak (ZA4G)
- · Available as type B (excess flow)
- · Available as type C (OPSO and excess flow)
- Available as type D (OPSO and UPSO)
- · Built-in pressure relief valve
- · UPSO device available with manual or automatic re-arming
- · Pressure test nipple
- · Adjustable settings or fixed set-point
- · Painting on request
- · Arctic version: working temperature -40 ÷ 60°C

Double Stage Pressure Regulators

S3

1 SCOPE

The **\$3** series regulators are a line of direct action type pressure regulators, double stage, normally used for domestic applications, if directly assembled to the meter or in decompression installations in gas grids and industrial uses for natural and manufactured gas, lpg, or other non-corrosive preliminarily treated stable gas.

2 FEATURES

- · Body in zamak (ZA4G)
- · Safety: Fixed UPSO and excess of flow
- · Built-in pressure relief valve
- · UPSO device available with manual re-arming
- · Fixed setting point or adjustable setting
- · Anti-Tampering construction
- · In accordance to NF E29-190-2 (05/11) + NF404

Double Stage Pressure Regulators

S4

1 SCOPE

The **\$4** series regulators are a line of direct action type pressure regulators, double stage, normally used for domestic applications, if directly assembled to the meter or in decompression installations in gas grids and industrial uses for natural and manufactured gas, lpg, or other non-corrosive preliminarily treated stable gas.

2 FEATURES

- · Body in zamak (ZA4G)
- · Available as type B (equipped with excess flow)
- · Available as type C (equipped with excess flow and OPSO)
- · Available as type D (UPSO and OPSO)
- · Built-in pressure relief valve
- · UPSO device with manual and/or automatic re-arming
- · Available with fixed setup or adjustable setting
- · Pressure test nipple
- · Painting on request
- · Arctic version: working temperature -40 ÷ 60°C

Double Stage Pressure Regulators

S7

1 SCOPE

The **\$7** series regulators are a line of direct action type pressure regulators, double stage, normally used for domestic applications, if directly assembled to the meter or in decompression installations in gas grids and industrial uses for natural and manufactured gas, lpg, or other non-corrosive preliminarily treated stable gas.

2 FEATURES

- · Body in aluminium die-cast
- · Diaphragms in rubber (with cloth enforcement for MP version)
- · Available with or without OPSO UPSO and excess of flow
- · Adjustable OPSO and UPSO
- · Built-in pressure relief valve
- · Built-in filter
- · Pressure test nipple
- · Manual re-arming with anti-reset device
- · Fully maintainable
- · Adjustable settings
- · Painting on request
- · For Reference User Guide 50

Single Stage Pressure Regulators

S10

1 SCOPE

The **\$10** series regulators are a line of direct action type pressure governors, normally used for domestic applications, generally installed directly to the meter or in installations in gas grids for natural and manufactured gas, lpg, or other non-corrosive preliminarily treated stable gas.

2 FEATURES

- · Body in alluminium die-cast
- · Shut-off in case of excess of flow
- · Available as type A (regulator)
- · Available as type F (regulator + UPSO)
- · UPSO device with automatic or manual re-arming
- · Full discharge or partial relief valve
- · Adjustable setting
- · Built-in filter
- · Suitable for outdoor installation

Available layout:

- · N: Angle connection
- · U: Bottom entry

S5-S6

1 SCOPE

The **\$5** and **\$6** regulator due to their operating specifications are mainly used in those system where sudden capacity variations are required, or else, where the cut-off of the gas distribution is controlled by solenoid valve.

They can be used with natural gas, air, propane and other gases, as long as they do not containe a high percentage of benzole.

2 FEATURES

- · Body in cast iron
- · Covers in aluminium die-cast
- · Diaphragms in rubber with cloth enforcement
- · Safety device with manual re-arming
- · Adjustable setting
- · Full discharge or partial relief valve
- · Thraded connections in accordance to BSP and NPT (ISO)
- · Flange in accordance to
- · Gas loss protection (optional)
- · In accordance to 2014/68/EU EN334

Available versions:

- · A: unbalanced
- · L: balanced
- · H: balanced + OPSO shut-off valve
- · I: balanced + OPSO/UPSO shut-off valve

S21

1 SCOPE

The **\$21** regulators are a new line of pressure regulators – direct operating type – designed to guarantee a high regulation accuracy and a utmost easiness in use. These devices are usually used in distribution and industrial systems and are designed to be installed in regulation units in gas grids of natural, manufactured and lpg gas or other non corrosive gases, filtered at first.

2 FEATURES

- · Body in cast iron or steel
- · Covers in aluminium die-cast
- · Diaphragms in rubber with cloth enforcement
- · Seats in stainless steel
- · Springs in stainless steel
- · Counterbalanced
- · Anti-pumping device
- · Diaphragm shock adsorber or relief valve
- · Top entry
- · In accordance to 97/23 EC (PED) EN334

S21	5 or 6		19				500 ÷ 4000				410	1"x1"1/2

Available versions:

· B: with OPSO/UPSO shut-off valve

S22

1 SCOPE

The **\$22** are a new line of pressure regulator – spring loaded – suitable for use in canalized nets of low and medium pressure with non-corrosive gas filtered at first.

The feature peculiar to IPR regulators is the trivalent operating, i.e. in a single body is united the following operations: main regulator, monitor, shut-off valve.

Special use of a single body allows to reduce overall dimensions of regulation units and solve problems of replacement or conversion of existing units out of standard.

2 FEATURES

- · Body in cast iron or steel
- · Covers in aluminium die-cast
- · Diaphragms in rubber with cloth enforcement
- · Seats in stainless steel
- · Springs in stainless steel
- · Counterbalanced
- · Anti-pumping device
- · Diaphragm shock adsorber

Pilot Operating Pressure Regulators

S24

1 SCOPE

\$24 are a new line of pressure regulator – pilot-controlled – suitable for use in canalized nets of low and medium pressure with non-corrosive gas filtered at first.

The feature peculiar to TPR regulators is the trivalent operating, i.e. in a single body is united the following operations: main regulator, monitor, shut-off valve.

Special use of a single body allows to reduce overall dimensions of regulation units and solve problems of replacement or conversion of existing units out of standard.

2 FEATURES

- · X: With monitor and shut-off valve

Pilot Operating Pressure Regulators

S25

1 SCOPE

\$25 are a new line of pressure regulator – pilot-controlled – suitable for use in high pressure gas network with non-corrosive gas filtered at first.

The feature peculiar to APR regulators is the trivalent operating, i.e. in a single body is united the following operations: main regulator, monitor, shut-off valve.

Special use of a single body allows to reduce overall dimensions of regulation units and solve problems of replacement or conversion of existing units out of standard.

2 FEATURES

- · Body in steel
- · Covers in steel
- · Diaphragms in rubber with cloth enforcement
- · Seats in stainless steel
- · Springs in stainless steel
- · Counterbalanced
- · Anti-pumping device
- · Diaphragm shock adsorber

Relief valves

S27

1 SCOPE

The Relief valves **\$27** are devices which function is to maintain the pressure in the system or in pressure vessels within the limit set for the intervention.

These devices intervene following short-term events, providing to discharge externally a certain quantity of gas when the grid pressure exceeds the calibration pressure, thus avoiding or postponing the intervention of the slam shut devices.

2 FEATURES

- · Body in aluminium die-cast or steel
- · Diaphragms in rubber with cloth enforcement
- · Seats in brass
- · Springs in stainless steel

Regulators equipped with anti-flooding hood

SS/BE/20140209 - Version 1

We have conceived an anti-flood system, covering a surface of 10600 mm2, to be fitted to the whole range of the regulators designed for residential applications, buried version (regulator with capacity equal to or below 50m³/h). The "anti-flooding hood" system described above is therefore adaptable to all our models for series S1, S3 and S4.

Thanks to this system, the gas-regulator can be easily reset or put into service and the connections can be disassembled without any need of system dismantling. An identification plate, identical to that of the regulator, can be positioned into the anti-flooding hood. Some materials composing the regulator and in contact with the surrounding atmosphere shall be submitted to surface treatment in order to increase the product longevity in a very humid environment or subject to flood.

The parts in contact with the atmosphere made of: - Zamak will be covered with an electrolytic protective layer (dichromated zinc coating 18μ); - Aluminium shall undergo a chemical reaction (anodizing). The springs in contact with the atmosphere must be in stainless steel. (resetting lever, first and second stage pressure regulating spring).

The designs of these regulators foresee that all vents will be protected by this system.
